Project 3 Report

This project is an app calculator that calculates the maximum, minimum, mean, median and range. I created this project with my favorite editor VScode. I tested my app on google chrome which I usually prefer over other browsers and Microsoft edge. The site worked as expected on both browsers. The JavaScript learning curve was quite exciting although it was a load. The syntax is easy to use and similar to C++ in a way, that's why it was easy for me to pick up. As for time consumption, it's always the styling! I chose a nice modern background to go with the webpage. I also used a bootstrap template that I edited a lot of. I made the textboxes, button and title stand out. I want the webpage to look visually appealing once the user enters the website. Other than that, this project was very fun to build. Implementing the math and seeing it work was awesome. Although I had some minor issues along the way, I found a way to fix them and get this project up and running!
