Project 2 Report

The editor I used to create project 2, a webpage that can serve as my online resume is VScode. I enjoy using the editor because it is very simple to use. I am probably going to use this editor for the rest of my career. The browsers I used to test my website were google chrome and Microsoft edge. I prefer google chrome because it is very fast compared to other browsers. Learning bootstrap was fun and easy. Their tool is very easy to use as everything is provided for you. I used some icons from Font Awesome's website. I really like their icons because of their simple and modern look. They have many different looks for a single icon, and they are easy to use. The most time consuming was the styling as always. Things always need to look perfect and work perfect as well. For this project, I also used a resume template which turned out to be great.
